

2023 ANNUAL WASTE MANAGEMENT REPORT HYDRO ALUMINIUM KURRI KURRI SMELTER

Prepared By:

Richard Brown Managing Director Hydro Aluminium Kurri Kurri

Commercial-in-confidence

Note: The purpose of this report is to comply with EPL No. 1548 Condition R1.8.

Other Hazardous / Restricted Wastes

During 2023, with the completion of movement of spent pot lining off site for processing in 2022, the predominant activities on the Hydro Aluminium Kurri Kurri site were associated with the ongoing remediation works.

These activities have **not** produced any wastes streams requiring offsite disposal including wastes which are classified as hazardous or restricted, as well as general solid wastes. As per the relevant conditions in the SSD 6666 consent, all material associated with remediation of the smelter site have been placed in the on-site containment cell.

Capped Waste Stockpile

At the time writing this report Hydro and in accordance with the approval granted, via a State Significant Development application (No. 6666), the contents of the capped waste stockpile have now been excavated and placed in to a purpose-built containment cell, along with other non-recyclable process and demolition waste and contaminated soils. These activities commenced in 2021, now completed, are being regulated under the conditions of consent for the SSD as well as the current EPL (1548).

Ground Water Monitoring

Details of the impacted ground water associated with the Capped Waste Stockpile, are contained within the 2023 Groundwater Report prepared by Ramboll.
